

ANATOLII VASILEV

Frontend Developer

Rijeka, Croatia | anatolii.vslvv@gmail.com | [LinkedIn](#) | [@vas11yev1work](#) | <https://vslvv.com>

SUMMARY

- 6+ years of experience as a Frontend Developer, specializing in Vue.js and TypeScript.
- Architected and delivered a procurement platform that cut personnel costs by 42% for an online retailer with \$1.3B in revenue.
- Led migration of a core internal app from Vue 2 to Vue 3 for a telecom with 44M+ users, improving performance and maintainability.
- Built and scaled frontend applications for platforms serving 30K+ active users and processing over 1B calls annually.
- Experienced in building and maintaining applications for platforms with 30K+ active users and high-volume transactions.

SKILLS

Frontend: JavaScript (ES6+), TypeScript, Vue.js (Vue 2 & Vue 3, Composition API), Nuxt.js, React, Next.js, Tailwind, Jest, Vitest

Expertise in: code reviews, frontend application architecture, adaptive and semantic layout

Other: Node.js, Nest.js, REST API, GraphQL, SSR, Git, CI/CD, Docker

Languages: English (Intermediate), Russian (Native), Italian (Beginner)

PROFESSIONAL EXPERIENCE

VOXIMPLANT, (Kazakhstan) - cloud platform for communication with 30K+ active users and 1B+ calls per year

Senior Frontend Developer

Feb 2024 – Present

- **Core project:** Maintained and enhanced one of the key company products (omnichannel cloud contact center) with an average revenue of \$4mln a year: a web application across more than 5 countries with over 3.800+ end active users.
- **New features:** Architected and delivered a new dialer module from scratch, implementing a flexible UI for variable mapping that allowed clients to customize automated call flows and reduce campaign setup time.
- **Migration:** Participated in a major migration effort for the core application from Vue 2 to Vue 3, refactoring legacy components with the Composition API to improve performance and ensure long-term framework support.
- **State management, Localization:** Optimized state management and localization by implementing Vuex for scalable state handling and i18n, enabling the platform to scale across 5+ countries and support a growing international user base.
- **Component approach:** Ensured scalability and consistency across projects via a component-based approach, creating a custom design system.
- **Internal optimization:** Drove improvements to team-wide code quality and consistency by authoring and implementing a custom set of ESLint rules, reducing bugs in code review.

Stack: Vue 2/3, Vuex, TypeScript, Jest

VITECH, (Russia) - online retailer with \$1.3B annual revenue and more than 1.000 offline pick-up points in Russia

Middle Frontend Developer

Mar 2023 – Feb 2024

- **Core project:** Developed an internal platform for 1500+ users with up to 90,000 requests per day including business logic, coding, and tech documentation, which reduced personnel costs by 42% and order processing time for the Procurement department.
- **New features:** Built a Nest.js microservice (Puppeteer-based) for HTML-to-PDF conversion, replacing a deprecated system and providing flexible support for various B2B document formats.

Stack: Vue 2/3, Pinia, TypeScript, Jest, Nuxt.js, Nest.js

BEELINE, (Russia) - top 3 telecom operator in Russia with more than 44 million users

Frontend Developer

Mar 2021 – Mar 2023

- **Migration for the core project:** Architected and led the migration of a key internal tool from Vue 2 to Vue 3, redesigning the application to support 2,000+ customer service operators.
- **Business logic:** Developed and shipped over 100 features and components for the internal customer support platform, directly enabling operators to resolve user issues more efficiently.
- **Optimizing development:** Defined and executed technical OKRs, including the introduction of E2E testing, with more than 95% unit test coverage.

Stack: Vue 2/3, Pinia, TypeScript, Jest, Cypress

PERSONAL PROJECTS

Developed a web application across all devices and screen sizes, acting as a sole full-stack developer

- **Backend:** Developed backend using **Nest.js**, with **PostgreSQL**, **Redis**, and **Prisma ORM** for efficient data management. Integration with **S3 and payment system** for recurring payments
- Set up **GitLab CI/CD pipelines** to automate building, testing, and deployment processes.
- Deployed applications on servers with **Docker** and **Traefik**, including automatic SSL certificate configuration.
